

About the Course

- ▶ The computational linguistics industry is booming like a hot cake. Language and Speech processing enabled technologies are now a days embedded in every smart devices. In recent years there has been a huge amount of interest and work from the research community on the use of Natural Language Processing (NLP). In this course, starting from basics to the latest concepts, expert lectures will be delivered by researchers in this field. NLP plays an important role in text and speech processing. Speech Processing is a scientific discipline as well as a technology frontier with immense applications. As a scientific discipline it has a long history and as a technology area it is intensively explored both by industry and academia. On one side of the spectrum is the speech & language sciences, such as linguistics, phonetics and psychoacoustics, and on the other side are the signal processing theory and pattern recognition and artificial intelligence. The aim of the course is to contribute to the cross fertilization between the research on Machine Learning methods and their applications to Natural Language and Speech Processing.
